DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Doan et al. (U.S. Patent No. 5,456,708) in view of Hoff (U.S. Patent No. 5,522,872).

Doan et al. teaches of an implantable flexible lead assembly, comprising a screw-in helix electrode for extending and contracting (col. 2 lines 64-67), a flexible electrically conductive coil housed within an insulating tube (col. 4 lines 41-44), a radiopaque ring (collar) at the distal tip of the lead (col. 3 lines 1-4). Doan et al. further teaches of the radiopaque ring being fabricated of a biocompatible, biostable metallic such as a platinum/iridium alloy. Doan et al. also teaches of a helical shaft being electrically and mechanically coupled to a rotatable connector pin (col. 4 lines 41-44). Doan et al. further teaches that the helix electrode may be made of a platinum/iridium alloy, which is inherently a radiopaque material.

Hoff teaches of an electrode-conductor sleeve joint for a cardiac lead that comprises a conductor made from a multifilar coil of drawn filled tubing (col. 4 lines 50-53). Hoff further teaches that the drawn filled tuning is composed of a flexible, hollow tube, made of MP35N (col. 4 lines 54-58). Hoff also teaches that the conductor may be surrounded by an insulator (col. 4 lines 53-54).

Application/Control Number: 10/718,216

Art Unit: 3762

It would have been obvious to one having ordinary skill in the art at the time of the invention to combine the teachings of Doan et al. and Hoff to have a flexible electrically conductive coil made of electrically conductive polymer or MP35N, in order to facilitate movement of the lead and to allow electricity to flow along the lead. Further, electrically conductive polymers and MP35N are inherently transparent fluoroscopically.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bisping (U.S. Patent No. 4,106,512), Morris (U.S. Patent No. 5,374,286), Li (U.S. Patent No. 5,716,390).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lenwood Faulcon, Jr. whose telephone number is 571-272-6090. The examiner can normally be reached on Monday-Thursday from 9 to 5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Angela D. Sykes, can be reached on 571-272-4955. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should
